Types of Thresholding.

Thresholding may be categorized as follows:

(a) Global thresholding: If thresholding (T_h) depends upon only the gray levels of an image.

(b) Local thresholding: If thresholding (T_h) depends upon the gray levels of image and some local properties also.

(c) Adaptive thresholding: When thresholding depends upon gray level, local properties and spatial co-ordinates (position of pixels) of pixels. This is called dynamic thresholding.
